

Consider the following “Customer” table and solve the queries.

<u>C id</u>	name	Branch	Gender	Savings
101	Rahim	Gulshan	Male	10000
102	Karim	Banani	Male	20000
103	John	Gulshan	Male	10500
104	Akber	Dhanmondi	Male	40000
105	Sahid	Baridhora	Male	35000
106	Mila	Banani	Female	85000
107	Sarah	Malibagh	Female	58000

1. Create the table “customer” under the database Lab2.
2. Find all the customer names of Banani and Gulshan branch.
3. Find all the female customer information whose saving amount is between 40K to 60K and from Banani branch.
4. Add a new column “withdraw” and update withdraws to 500 to the last five records only.
5. Find the names of the customer whose name end with “im”.
6. Find the name of the customer who has lowest saving and display the name as Low_saving.
7. Update the Branch = Banani of customer id 101.
8. Delete the record of the customer whose id is 107.
